

# Drawings SDK & Drawings in WEB

## Supported file formats

Drawings SDK supports **.dwg**, **.dgn**, **.dxf** file formats.

It supports **.dwg** file versions from AutoCAD 12 (AC1009) through AutoCAD 2025 (AC1032).

Drawings inWEB supports only **.dwg** /.**dxf** for now.

## Drawings features

### Create

Develop and add new content to your **.dwg** files, including custom entities and complex data structures, with full support for all standard **.dwg** elements.

### Edit

Modify existing **.dwg** content, including geometry, metadata, and object properties, using a wide range of editing tools tailored for precision and flexibility. Edit **.dwg** according to a rule or a business scenario.

### Save

Save your changes seamlessly to **.dwg** files, ensuring compatibility across different versions of AutoCAD and other **.dwg**-compatible applications.

## **Visualize .dwg, .dxf and .dgn on any platform**

Render .dwg and .dgn files seamlessly across platforms with fast performance and a comprehensive feature set. Advanced techniques like spatial filtering ensure smooth rendering, even for large models. Navigate with ease using standard tools like zoom, pan, and 3D rotation. Achieve realistic visuals with customizable materials, lighting effects, and visual styles, including hidden edges and transparency.

## **Point Cloud Support**

Import, visualize, and manipulate large point cloud datasets within .dwg files, facilitating detailed analysis and 3D modeling.

## **Conversion**

Export: .dwg, STL, 2D, PDF, 3D PDF, OBJ, Collada, SVG, Raster

Import: Collada, .dwf, STL, SVG, 2D PDF

## **Revision Control**

Implement version control in your .dwg files, allowing you to track changes, revert to previous versions, and manage file history.

## **Incremental Saving for .dwg Files**

Drawings SDK has an incremental file saving feature for .dwg files that saves only modified data, which is faster than a full save for large files that don't contain a lot of modifications.

## **Partial and Multithreaded (MT) Loading of .dwg Files:**

Supports partial loading, allowing users to load only the necessary parts of large .dwg files to enhance performance. Multithreaded loading further improves speed by utilizing multiple CPU cores for faster access to complex drawings.

## **Digital Signatures for .dwg Files**

Provides functionality for validating and applying digital signatures to .dwg files, ensuring file integrity and authenticity. This feature is essential for maintaining the security of drawing files in professional workflows.

## **Working with Geo-Data**

We provide special classes for working with geo-data as well as access to third-party libraries such as csmapi, curl and tinyxml. Sample code is available as well.

## **Recover/Repair Incorrect Files**

Use built-in tools to automatically detect and fix corruption or errors in .dwg files, ensuring data integrity and usability.

## **Dynamic Blocks Evaluation**

Provides full support for dynamic blocks, allowing users to interact with them within DWG files. Modifications can be implemented using our library to recalculate dynamic blocks based on new parameters.

## **TTF/SHX Fonts Support**

Ensures compatibility with both TrueType (TTF) and SHX fonts, accurately rendering text within .dwg files. This includes support for a variety of font styles, ensuring that the appearance of text remains consistent across different platforms.

## **Native Support for 3D Modeling Operations**

Provides built-in support for basic 3D modeling operations within .dwg files. This functionality is developed internally by ODA and offers essential 3D modeling features at no additional cost, but with limited capabilities.

## **Constraints**

Apply and manage geometric and dimensional constraints to maintain relationships between objects, ensuring design accuracy.

## **Wrappers**

Access the functionality of the Drawings SDK not only in cross-platform C++, but also through easy-to-use wrappers for C#, Python and JS, streamlining development processes.

## **Common Data Access (CDA)**

Utilize CDA to abstractly access and manage data from various formats, providing a unified approach to interacting with .dwg and other file types.

## **Spatial ACIS-Based 3D Modeling Support**

Offers advanced 3D modeling operations through integration with the Spatial ACIS library. This option provides a more comprehensive and powerful set of 3D modeling tools, but it requires a paid license for full functionality. This solution is ideal for users who need a broader range of modeling capabilities beyond the native support.

## Sample Applications

Here you can find an overview of the Drawings Sample applications available to all ODA Members, including [trial users](#). If you're interested in any of these, links to the documentation will become available immediately after applying for [a free trial](#).

Name	Description
<a href="#">OdCopyEx</a>	Reading a drawing file and saving it as a new .dwg, .dxf, or .dxb file.
<a href="#">OdReadEx</a>	Reading a drawing file and displaying all information about the entities and object types located in the file.
<a href="#">OdWriteEx</a>	Creating a new drawing, populating it with various entities, and saving to a file.
<a href="#">IncrementalSaveEx</a>	Opening a drawing, populating it with additional entities, and incrementally saving it in two different streams.
<a href="#">OdVectorizeEx</a>	Dumping geometry of the active layout to the console.
<a href="#">OdExtractTextEx</a>	Extracting text content from a drawing file to the command prompt window (or redirects to a file).
<a href="#">OdGetGeomEx</a>	Dumping an entity's geometry using vectorization.
<a href="#">OdOpenGL</a>	Module that provides a GLWidget to render drawing context.
<a href="#">ExCommands</a>	Module implementing a number of commands.

<a href="#"><u>ExCustObjs</u></a>	Custom entities implementation with testing and debugging commands.
<a href="#"><u>jni</u></a>	C++ native JNI shared library (.so). It is used in <a href="#"><u>OdaAndroidDgnApp</u></a> to provide Drawings SDK functionality.
<a href="#"><u>OdaAndroidDgnApp</u></a>	Android specific application illustrating reading and rendering of .dgn files.
<a href="#"><u>ExDgnCellTransform</u></a>	Creating a .dgn file with transformed cells.
<a href="#"><u>ExDgnCloning</u></a>	Sample commands to test deep clone and wblock clone functionality.
<a href="#"><u>ExDgnColladaExport</u></a>	Reading a .dgn file and exports its contents to a Collada (.dae) file.
<a href="#"><u>ExDgnCopy</u></a>	Simplest cross-platform console application that converts a .dgn file to a specified format and version.
<a href="#"><u>ExDgnCreate</u></a>	Creating a new drawing, populating it with various elements and saving it to V8 .dgn file.
<a href="#"><u>ExDgnDump</u></a>	Reading a .dgn file and dumping database contents to the console.
<a href="#"><u>ExDgn.dwgProject</u></a>	Simple console application for working with .dwg and .dgn files.
<a href="#"><u>ExDgnGripPoints</u></a>	Sample implementation of the OdDgGripPointsPE interface for .dgn files.
<a href="#"><u>ExDgnMaterials</u></a>	Creating a new .dgn file with internal materials.

---

<a href="#"><u>ExDgnOverruling</u></a>	Sample overruling implementation for .dgn files.
<a href="#"><u>ExDgnReadWrite</u></a>	Reading and modifying a .dgn file.
<a href="#"><u>ExDgnTextFormat</u></a>	OdDgV7FontMapper class usage for .dgn files.
<a href="#"><u>ExDgnToBmp</u></a>	Converting a .dgn file to a .bmp file.
<a href="#"><u>ExDgnVectorize</u></a>	Dumping the active layout geometry for .dgn files.
<a href="#"><u>ExDgnViewCreate</u></a>	Creating a new V8 .dgn file.
<a href="#"><u>ExDgnXRefDump</u></a>	Working with reference attachment elements.
<a href="#"><u>ExDimensioning</u></a>	Creating a new .dgn file with dimension type elements.
<a href="#"><u>Ex.dwgXData</u></a>	Dumping XData linkages.
<a href="#"><u>ExReactors</u></a>	Database reactors usage sample for .dgn files.
<a href="#"><u>ExSimpleProject</u></a>	Creating a new V8 .dgn file.
<a href="#"><u>ExSplines</u></a>	Creating a new V8 .dgn file with splines.
<a href="#"><u>ExTags</u></a>	Creating a new V8 .dgn file with tags.
<a href="#"><u>ExDeepCloning</u></a>	Deep clone sample.
<a href="#"><u>ExDimAssoc</u></a>	Recomputing associative dimensions.
<a href="#"><u>ExDynamicBlocks</u></a>	Creating and editing dynamic blocks.
<a href="#"><u>ExEntityIntersection</u></a>	OdDbEntityIntersectionPE interface implementation.

---

<a href="#"><u>ExEvalWatchers</u></a>	Hatches and dimensions evaluation notification functions.
<a href="#"><u>ExFieldEvaluator</u></a>	Text fields evaluator.
<a href="#"><u>ExPointCloudHost</u></a>	OdDbPointCloudHostPE interface implementation.
<a href="#"><u>GeolocationObj</u></a>	Working with geo-map objects.
<a href="#"><u>GripPoints</u></a>	OdDbGripPointsPE interface implementation.
<a href="#"><u>ModelerCommands</u></a>	Working with 3D solids.
<a href="#"><u>OdAveEx</u></a>	Working with AVE sample.
<a href="#"><u>OdBagFiler</u></a>	Using the oddbEntGet() function sample.
<a href="#"><u>OdBrEx</u></a>	Traversing curves in a drawing file.
<a href="#"><u>OdCurveFunctions</u></a>	OdDbCurvePE interface implementation sample.
<a href="#"><u>OdDbGeoMapPE</u></a>	Geo-map object protocol extension sample.
<a href="#"><u>OdPC3Read</u></a>	Dumping a .pc3 file to an .xml file.
<a href="#"><u>OdSheetSet</u></a>	Reading, dumping and writing a .dst file.
<a href="#"><u>Overruling</u></a>	Illustrating the overruling feature.
<a href="#"><u>OdColladaExportEx</u></a>	Exporting a drawing file to a Collada (.dae) file.
<a href="#"><u>OdDwfExportEx</u></a>	Exporting a drawing file to a .dwf file.
<a href="#"><u>OdPdfExportEx</u></a>	Exporting a drawing file to a .pdf file.
<a href="#"><u>OdSvgExportEx</u></a>	Exporting a drawing file to a .svg file.

---

<a href="#"><u>OdWmfExport</u></a>	Exporting a drawing file to a .wmf file.
<a href="#"><u>ExDgnImport</u></a>	Importing a .dgn file to a .dwg file.
<a href="#"><u>OdColladaImportEx</u></a>	Importing a Collada (.dae) file to a .dwg/.dxf file.
<a href="#"><u>OdDwflImportEx</u></a>	Importing a .dwf file to a .dwg/.dxf file.
<a href="#"><u>jni</u></a>	C++ native JNI shared library used to provide ODA Drawings SDK functionality for Android applications.
<a href="#"><u>OdaAndroidApp</u></a>	An Android specific sample application illustrating reading and rendering .dwg, .dxf, .jpg, .dae and .dwf files.

Native support of 3d modelling operations	+	-

## Working with Other Formats

Drawings SDK offers a variety of possibilities for importing and exporting other formats to/from .dwg and .dgn.

The following table describes all the supported formats:

Format	Export	Import
.dgn	yes	yes

.dwf	yes	yes
.pdf	yes	yes
.dae (Collada)	yes	yes
.svg	yes	beta
Raster Formats	yes	no
.stl	yes	yes
.hsf	yes	no

## **.dwg for Architecture, Civil, Map, and Mechanical**

ODA Provides separate products for each of them:

- [Architecture SDK](#) is available via a Core Package, so when you subscribe to any membership level - you'll get access both to Drawings and Architecture SDKs. More about that in the pricing section below.
- [Civil](#), [Mechanical](#), [Map](#) SDKs are extensions for the respective .dwg formats. Subscription to each of these Extensions requires an additional fee and is available only to Sustaining, Founding, or Corporate members.

## Pricing

ODA operates under a membership-based model, where the membership fee is per company, not per developer. You can find all pricing details on our website.

### Membership Levels:

- **Commercial:** Ideal for desktop/mobile applications with fewer than 100 copies of the end-user product distributed annually. Only the Core Package is available at this level.
- **Sustaining:** Suitable for unlimited distribution of desktop/mobile applications or web/SaaS solutions. This level allows access to various Extensions in addition to the Core Package.
- **Founding:** Offers access to the source code of the SDKs, along with all the benefits of the Sustaining membership.

[Drawings SDK is a part of the Core Package](#), making it available to all membership levels.

What is [the Core Package](#)?

The Core Package includes access to the Visualize, Architecture, IFC, STEP, and Publish SDKs. Please note that individual products from the Core Package cannot be purchased separately.

Extensions are additional products that can be licensed separately:

[BimRv](#): supports .rvt/.rfa formats.

[BimNv](#): supports .nwc, .nwd, .nwf formats.
